

# Costly and Damaging Regulations Proposed for Whatcom County

The Whatcom County Council is quietly pushing to approve new regulations for Cherry Point that will likely damage our economy for decades to come. These unprecedented changes to local regulations would impose far-reaching restrictions on vital business activities and risk the future of thousands of local jobs and millions of critical tax dollars from Cherry Point refineries.

## THE UNPRECEDENTED CHANGES

The Whatcom County Council is proposing the most extensive changes to local regulations in nearly four decades that will single out one, economically vital sector of the county's business community. Overall, these proposed regulations will:

- Lead to harmful economic consequences for the county.
- Result in unintended environmental consequences.

### What are we asking of the Whatcom County Council?

The Whatcom County Council should NOT move forward with its proposed regulations. The current regulations in place are sufficient and there shouldn't be any changes made without adequate time for stakeholder and community involvement.

## NEW REGULATIONS WILL RESTRICT BUSINESS CRITICAL TO WHATCOM COUNTY

Cherry Point refineries are the fourth largest on the West Coast, and critical to meeting fuel needs for cars, trucks and airplanes throughout the Pacific Northwest. But the changes proposed by the County Council will single out this industry with troublesome regulations.

### EFFECTIVELY PROHIBIT UPGRADES:

The new regulations would effectively prohibit new operational upgrades often needed to improve efficiency and allow businesses to adapt to shifts in U.S. and global market conditions.

### RISING COSTS & NO INVESTMENT:

The proposed regulations could raise costs for transportation of fuels vital to the region's economy and discourage investment that could result in a loss of local jobs and tax revenue.

### HURTING COMPETITIVENESS:

With limited ability to adapt and make necessary upgrades, Whatcom businesses will be at a competitive disadvantage to companies outside our county, including foreign fuel suppliers.

## BUSINESSES AT CHERRY POINT ARE CENTRAL TO THE COUNTY'S ECONOMY

**10,000 jobs**

directly and indirectly supported within Whatcom County<sup>1</sup>

**\$1 million +**

paid annually to local charities, like the Boys and Girls Club, the Red Cross and the United Way by businesses at Cherry Point<sup>1</sup>

**\$10s of millions**

invested by businesses at Cherry Point to lower greenhouse gas emissions and improve storm water and wetlands resources<sup>2</sup>

**\$200 million +**

paid annually in state and local taxes by businesses at Cherry Point<sup>1</sup>

**\$10s of millions**

invested in local schools, public safety, and other vital county services<sup>1</sup>

**Thousands of hours**

of volunteer time dedicated by Cherry Point employees to local non-profits every year<sup>2</sup>

## MISSING THE MARK: THE ENVIRONMENTAL CONSEQUENCES

The County Council claims one of their goals is to help the environment. But these new regulations miss the mark.

**Limit Development of Green Energy:** The proposed regulations would also apply to renewable energy projects at Cherry Point and therefore also limit the development of green and renewable energy resources. This includes preventing infrastructure upgrades that would hinder the transition to cleaner, lower emission fuels and increased production efficiency.

**Increased Greenhouse Gas Emissions:** The proposed regulations would likely increase greenhouse gas emissions, by forcing local energy needs to be met by fuel imported from longer distances and processed by less efficient and innovative facilities. In fact, Cherry Point refineries already invest tens of millions to lower greenhouse gas emissions and improve storm water and wetlands resources.
